Hunter

SUMMARY

Detail-oriented Game Programmer with a strong foundation in game systems, commercial engines, and algorithm optimization. Skilled in problem-solving and clean code practices, with a focus on building efficient, scalable game architecture.

SKILLS

- Languages: C++, C#
- Game Engines: Unity, Unreal
- Graphics & Tools: OpenGL, .NET Development, Custom Engine Architecture
- Version Control & Collaboration: Git, GitHub, Unity Version Control, Trello

LANGUAGES

English

Norwegian

PROFESSIONAL EXPERIENCE

Freelance 3D Artist & Games Modder

08/2024 – 12/2025 | Plymouth

- Modeled and textured 100+ commercial 3D assets for international clients across custom game mods.
- Integrated 3D models into games using Unity and engine asset pipelines, optimizing poly-counts and materials for runtime performance.

Chef

02/2026 – Present

- Managed kitchen operations under tight time constraints, ensuring high efficiency and attention to detail during peak service.
- Led a small team through fast-paced shifts, demonstrating strong communication, task delegation, and pressure management.

PROJECTS

Engine Programming

10/2026 – Present

- Architected a modular C++ 3D engine utilizing OpenGL & programming custom physics integration.
- Implemented core engine subsystems including physics, input handling, bounding volume hierarchy and player controllers.

Kilogen

09/2025 – Present

- Developed custom physics mechanics for player locomotion, featuring wall-running, momentum conservation, and dynamic vaulting.
- Engineered dynamic environmental physics parameters, including variable planetary gravity vectors and atmospheric air density calculations.

Car Simulator

09/2026 – Present

- Programmed a modular vehicle simulation system handling real-time physics for suspensions, gearboxes, and engine torque curves.
- Designed reusable, decoupled component architectures allowing vehicle modules to be easily swapped and tuned.
